INTEGRATED AUTHORITY FILE

(IAF)

2d Edition

1974

This is the second edition of the INTEGRATED AUTHORITY FILE (IAF) to be published by the Index Section, National Library of Medicine. It has five purposes: 1) to assemble indexing instructions for terms garnered from the medical literature indexed daily; 2) to attempt to achieve uniformity in indexing and searching these terms; 3) to consolidate the wide variety of tools used by indexers, some not easily accessible to searchers; 4) to identify terms which require indexing instructions but which do not lend themselves to a place in a formal thesaurus; and 5) to provide a source of new terms used most commonly by indexers and searchers toward enlarging the MEDICAL SUBJECT HEADINGS (MeSH) store of terms.

The content of this edition of the IAF derives from many sources, chiefly from the indexing tools produced by Index Section. The tools and other sources from which the entries were taken have been given a two or three-letter abbreviation; these appear after each IAF entry.

1. Ainsworth & Bisby's Dictionary of the Fungi
(6th edition, 1971) (FUN) - all tribes, families, orders, subclasses and classes have been entered
2. Andrewes and Pereira's Viruses of Vertebrates
(3d edition, 1972) (VIR) - all virus genera and families have been entered
3. CELL LINES (CEL) - all entries were updated to conform to the 1974 MeSH; many new terms were added from the literature
4. DENTISTRY (DEN) - all terms were updated
5. EPONYMOUS SYNDROMES (SYN) - indexing instructions were completely revised, based on a re-indexing of only the main entries in Jablonski's Illustrated Dictionary of Eponymic Syndromes and Diseases

MC-1 DIR E04689 290308

6. GENETICS (GEN) - this glossary was updated and amplified by a geneticist on the indexing staff
7. IMMUNOLOGY (IMM) - the glossary was updated
8. INTEGRATED AUTHORITY FILE (IAF) - entries from the first IAF were selected for their currency and updated
9. MEDICAL SUBJECT HEADINGS (MSH) - entries thus marked denote terms found in any MeSH product: synonyms taken from Main Heading definitions and from Provisional Heading definitions, and deleted headings taken from the annual MeSH introductions
10. PARASITOLOGY (PAR) - the glossary was updated
11. Parkinsonism Thesaurus (NEU) - from this, selected terms were taken, updated and further amplified by terms in Strong & Elwyn's Human Neuroanatomy (4th edition, 1959)
12. PHARMACY AND PHARMACOLOGY (PHA) - the glossary was updated
13. RESPIRATION PHYSIOLOGY (RES) - the glossary was updated
14. TECHNICAL NOTES (Tn) - those notes giving indexing instructions for problem areas were selected and updated
15. TUMOR MANUAL (TUM) - from this both direct and indirect forms were entered expediently
16. VETERINARY MEDICINE (VET) - the glossary was updated

While it is expected that indexers and searchers will use the IAF daily as an adjunct to MeSH, it should be known that, in addition to this printed form, the IAF is in machine-readable form. This will permit easy modification of data and the printed version will be updated to reflect current changes in MeSH.

Additions will be made from the Indexer Query Forms handed in daily and from both formal and informal inquiries from searchers and other users in the field.

Here is a representative entry in the IAF:

```
hematomole (TUM)
  *hematoma, tuberous subchorional
  X DECIDUA
  X HEMATOMA
  N OVUM
  P SYNDROME
```

The symbol in parentheses (TUM) is the abbreviation for the tool source from which the entry was taken. The indexing instructions are X for an INDEX MEDICUS (IM) term, N for a NON-INDEX MEDICUS (NIM) term and P for a MeSH Provisional Heading.

The asterisked (*) item is a cross-reference and also appears in proper alphabetical position; thus, to use the same example:

```
*hematoma, tuberous subchorional
  see hematomole
```

When an indexing instruction is a main heading which requires abbreviation on the Data Form as demanded by the computer, the abbreviated form of the main heading is shown. This will keep the indexer from having to look up the abbreviation in the Annotated MeSH. Thus, in

```
epizootic adenomatosis
  X PULM ADENOMATOSIS, OVINE
```

the Indexer must use the heading as given instead of typing PULMONARY ADENOMATOSIS, OVINE in full.

When a subheading appears in the indexing instructions, it is typed as given, with a slash:

```
ENCEPHALOMYELITIS / microbiology
```

Because of the printout limitations, there are a few entries with peculiar hyphenations: the machine broke words without regard to English usage. An attempt was made either to indicate by hand a hyphen which was not actually supplied by the computer or to supply by hand single spill-over letters on the proper line.

As with MeSH, many terms appear here in direct form (myelin sheath internodes), many in inverted form (arteritis, senile), and many in both (entries taken from the TUMOR MANUAL). Those taken from MeSH definitions available are almost always in the direct form, copied as they appear there (familial muscular subaortic stenosis).

Since the IAF is meant to supplement MeSH, MeSH cross-references for the most part do not appear in the IAF. A few have been included, especially those which require additional indexing parameters for specificity.

To those fortunate enough to own a copy of the first IAF, we suggest you retain it. It is invaluable in that it contains many definitions of terms not appearing in standard dictionaries and gives much source information.

Since most human productions fall short of perfection, to expect such of this IAF is not only unrealistic but unkind. Its deficiencies and errors should, however, be called to our attention; we can then resort to that most useful apologia of human endeavors, the Errata Sheet.

The present IAF, like its predecessor, represents the work of many people, much done on personal time. It is a joint effort of all indexers and revisers of both the National Library of Medicine and all associated MEDLARS centers. Special mention must be made of the contribution of Mrs. Thelma Charen, Mrs. Essie Lawrence, Mrs. Lillian Rummel, Miss Lillian Scanlon, Dr. Tamar Schaap, Mrs. Jerri Sherman, Mrs. Dora Timke, Miss Jacqueline van de Kamp, Dr. Elizabeth Van Lenten and Mr. Lloyd Wommack.
